Summary

Highly-skilled and motivated software engineer with 3 years of experience. Enhanced performance of 24 applications using PHP and Laravel Framework.

Experience

Full Stack Software Engineer | Future University | Sudan, Khartoum | March 2020 - Present

- Create scalable PHP / SQL web applications with an API and a custom authentication system from the ground up, and find new solutions and ideas that help the university control student information, professors and staff information

I.T officer | AL-Balad Bank | Sudan, Khartoum | September 2019 - October 2019

- I was working as a trainee in the information technology department of the bank. I learned from her how the banking systems work, how to deal with and manage customers, and also how to link the unified bank system with all the bank's branches

I.T officer | Raiba Trans Company | Sudan, Khartoum | October 2022 - February 2020

- I worked as trainee in this company as a trainee in the IT department with the chief programmer and we were working on an operating system specialized in managing employees in the company, we were developing it in the C# language and I was responsible for the validity tests.

I.T officer | Bashir Motors Nissan Dealership | Sudan, Khartoum | October 2021 - January 2022

- Information technology officer and responsible for the system and technical support for employees and management of the odoo system

Education

BA Honors in Information Technology | Future University , Sudan | Sudan/Khartoum | 2018 |

PROJECTS

Online Admission System | Online Admission For Future University | January 2021 - May 2022

- Successfully migrated the online admission system to a new server and updated the system to meet the new requirements of the university.

Student Information System | Student Information For Future University | May 2021 - August 2021

- Student Information System (SIS) is basically a software solution that enables educational institutions to digitize student information and thus manage it more efficiently. This system generally controls students' academic information and is used to extract their results and calculate their grades.

Archive Records System | Archive Records For Future University | July 2021 - November 2021

- This system archives all university files in one application using an electronic method, which facilitates their retrieval and modification.

Electronic Registration system | Electronic Registration system For Future University | January 2022 - March 2022

- This system works on electronic payments for students affiliated with the university, and it is connected to all Sudanese banks, which makes it easier for the university to control payments.

Project Unit Management System | PUMS For Future University | October 2020 - June 2021

- This system belongs to the university's project center, and it takes care of me managing all graduation projects for students.

Certifications
